

Will distributed ledgers change banking?

Philip Kinlen

AIB, Research & Innovation

Will distributed ledgers
change banking?

Yes.

but...

中本智

With bitcoin, how could we:

have 1,000 times the number of transactions,
give people privacy,
delete old data,
recover funds when a private key is lost,
block funds transfer when a private key is stolen,
revert a fraudulent transaction,
regulate it,
reduce the transaction fee,
get transaction confirmation within one second,
reduce power consumption by miners,
reduce price volatility?

Why do we still use paper certificates and ink signatures?

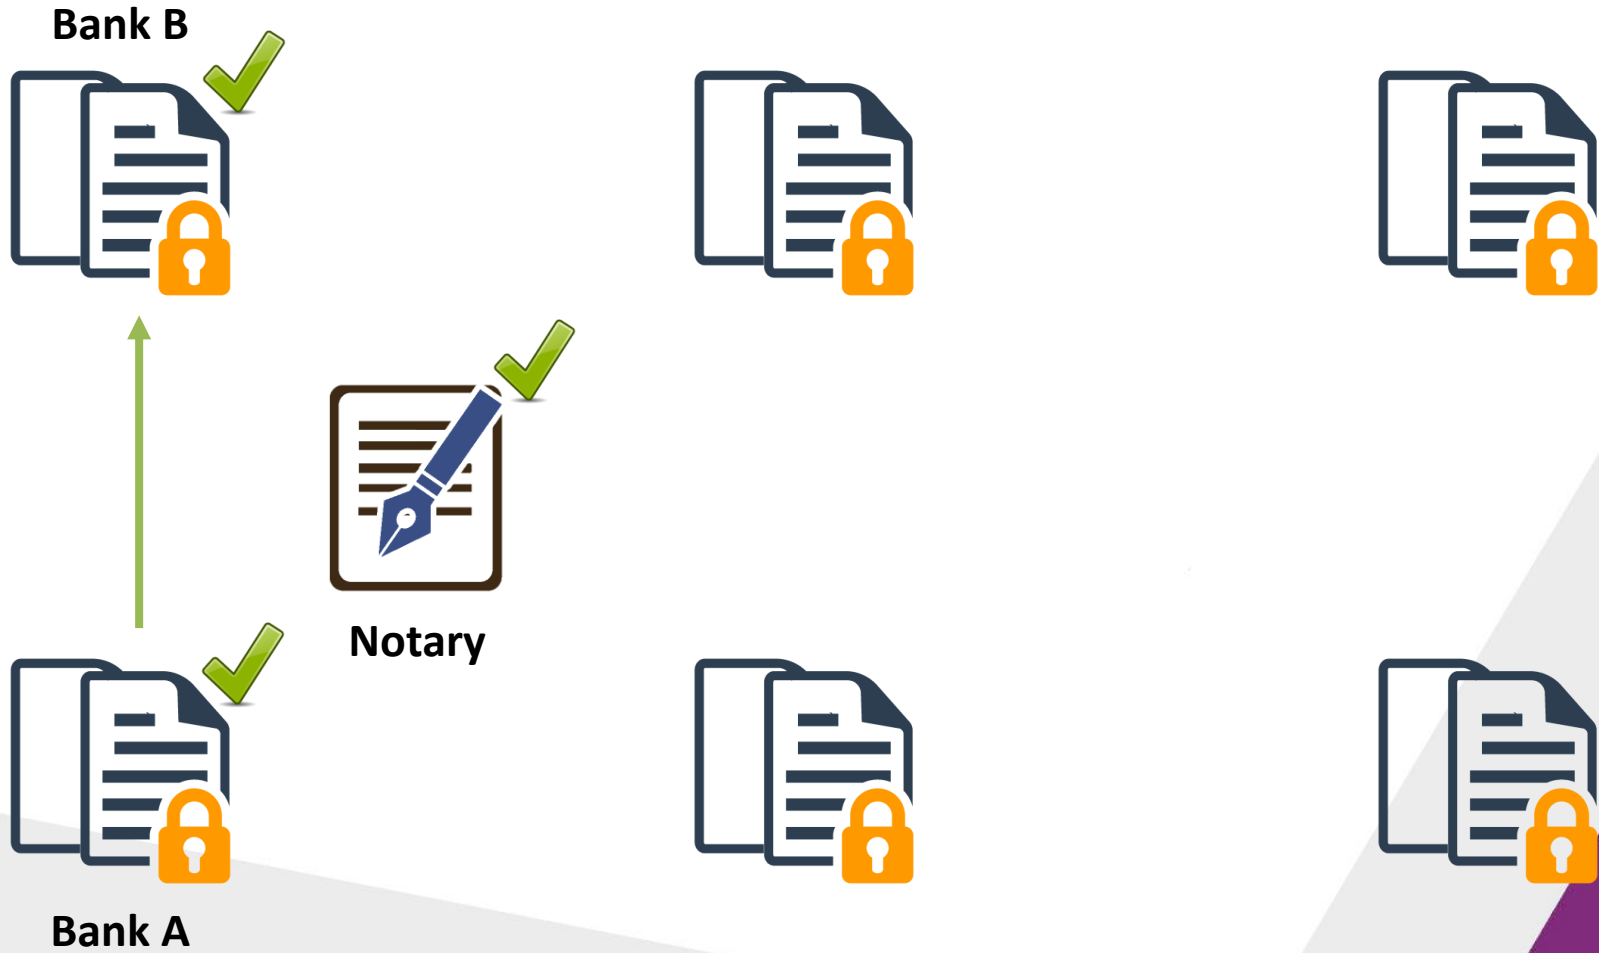

R³CEV & Corda

R3 has a distributed ledger

R3 Notary

For what can we use DLT?

Trade finance

Tracking collateral

Knowing your customer

Syndicated loans
